

Artificial Intelligence and Foreign Affairs

Project Title	Artificial Intelligence and Foreign Affairs
Project Summary	Research the international affairs implications of the revolution in artificial intelligence. Possible topics include lethal autonomous weapons, knowledge worker displacement, and cybersecurity, et al.
Country	United States
Agency	Department of State
DoS Office	EAP/RSP
Post	N/A
Section	N/A
Number of Interns	1

Project Description

I have a Foreign Service fellowship at the George Washington University to research and write about the international implications of artificial intelligence. Most of the existing literature focuses on law and policy around lethal autonomous weapons systems. I would like to expand this knowledge to the impact of knowledge worker displacement on countries and subsequent knock on effects for international relations, balance of trade, labor flows, etc. Participants would have the opportunity to research and write about these issues, including possible participation in AI conferences.

Desired Skills Interests

Skill
Research
Artificial Intelligence
Machine Intelligence
Analytical Writing
International Affairs

Additional Information

Previous knowledge and experience with AI is preferred but is less important than a passion for the nexus between AI and international affairs. I'm looking for a strong researcher who can summarize complex topics into written material which is accessible to senior, but non-technical policy makers.

Language Requirements

None
